

SkillCat Product Design Task

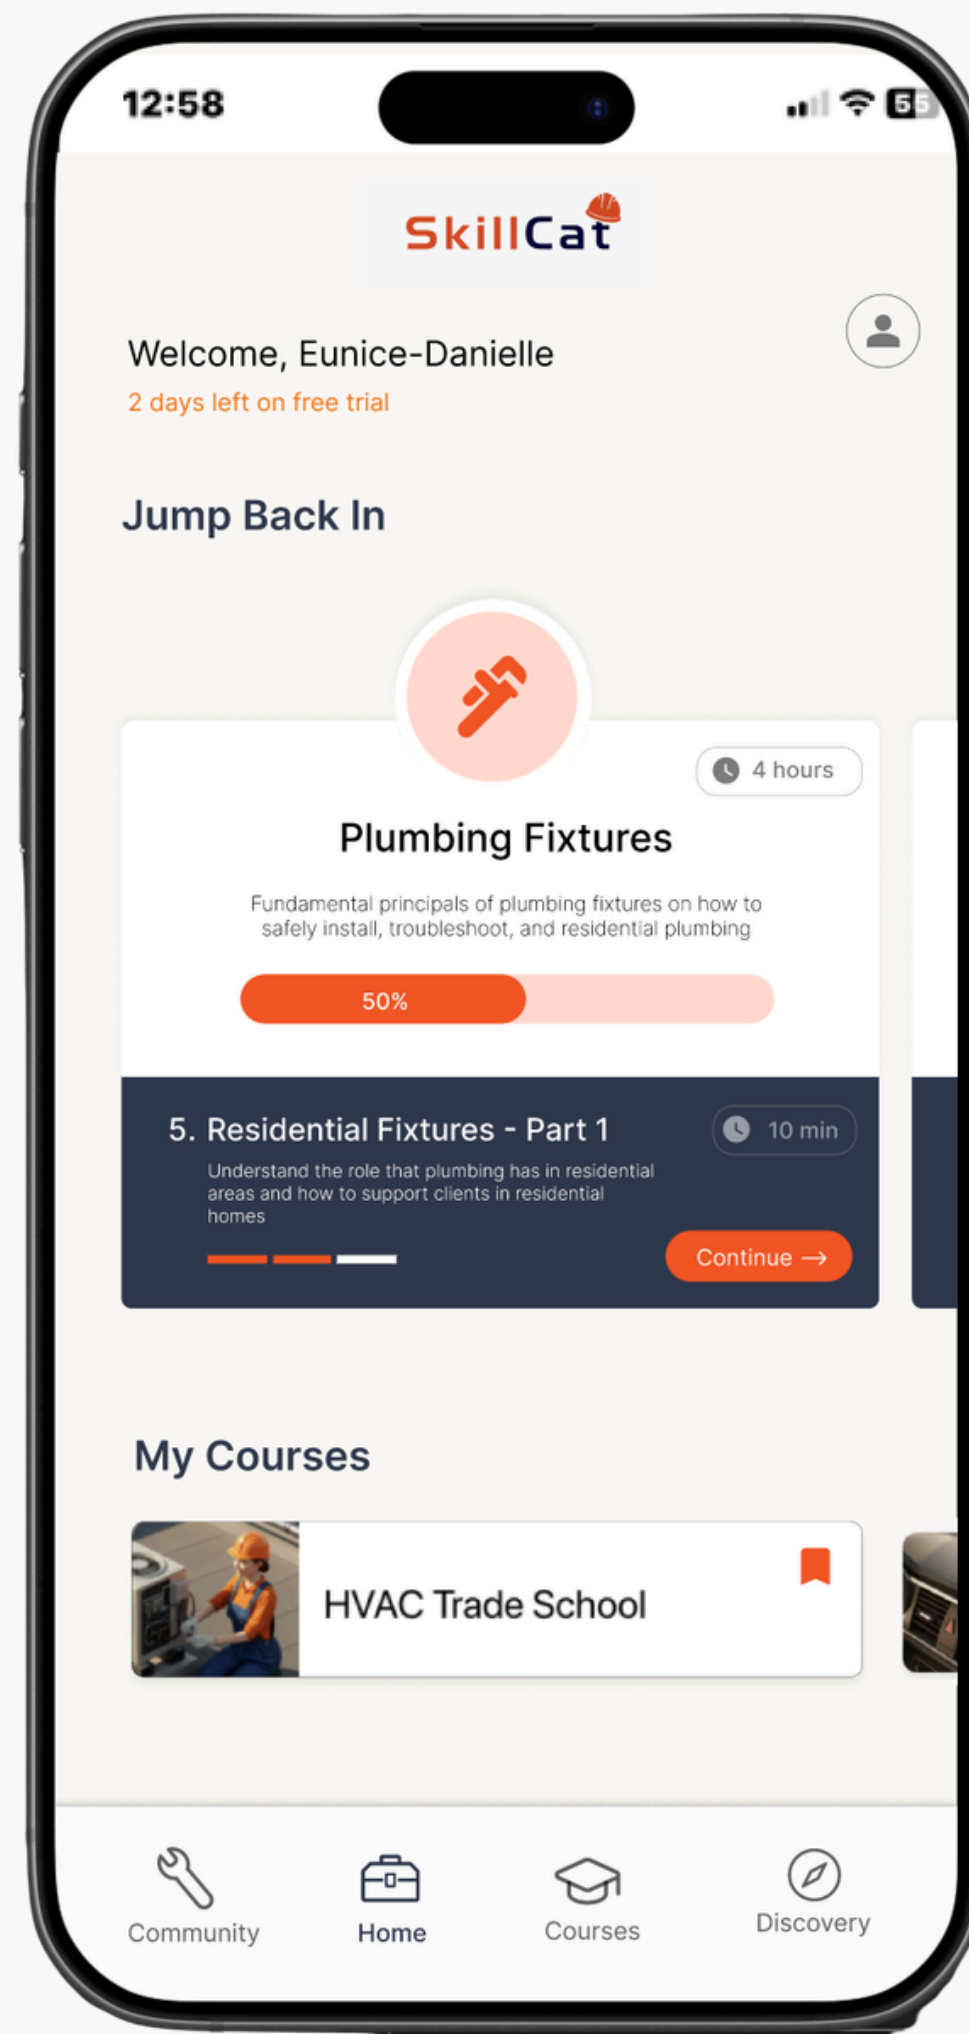

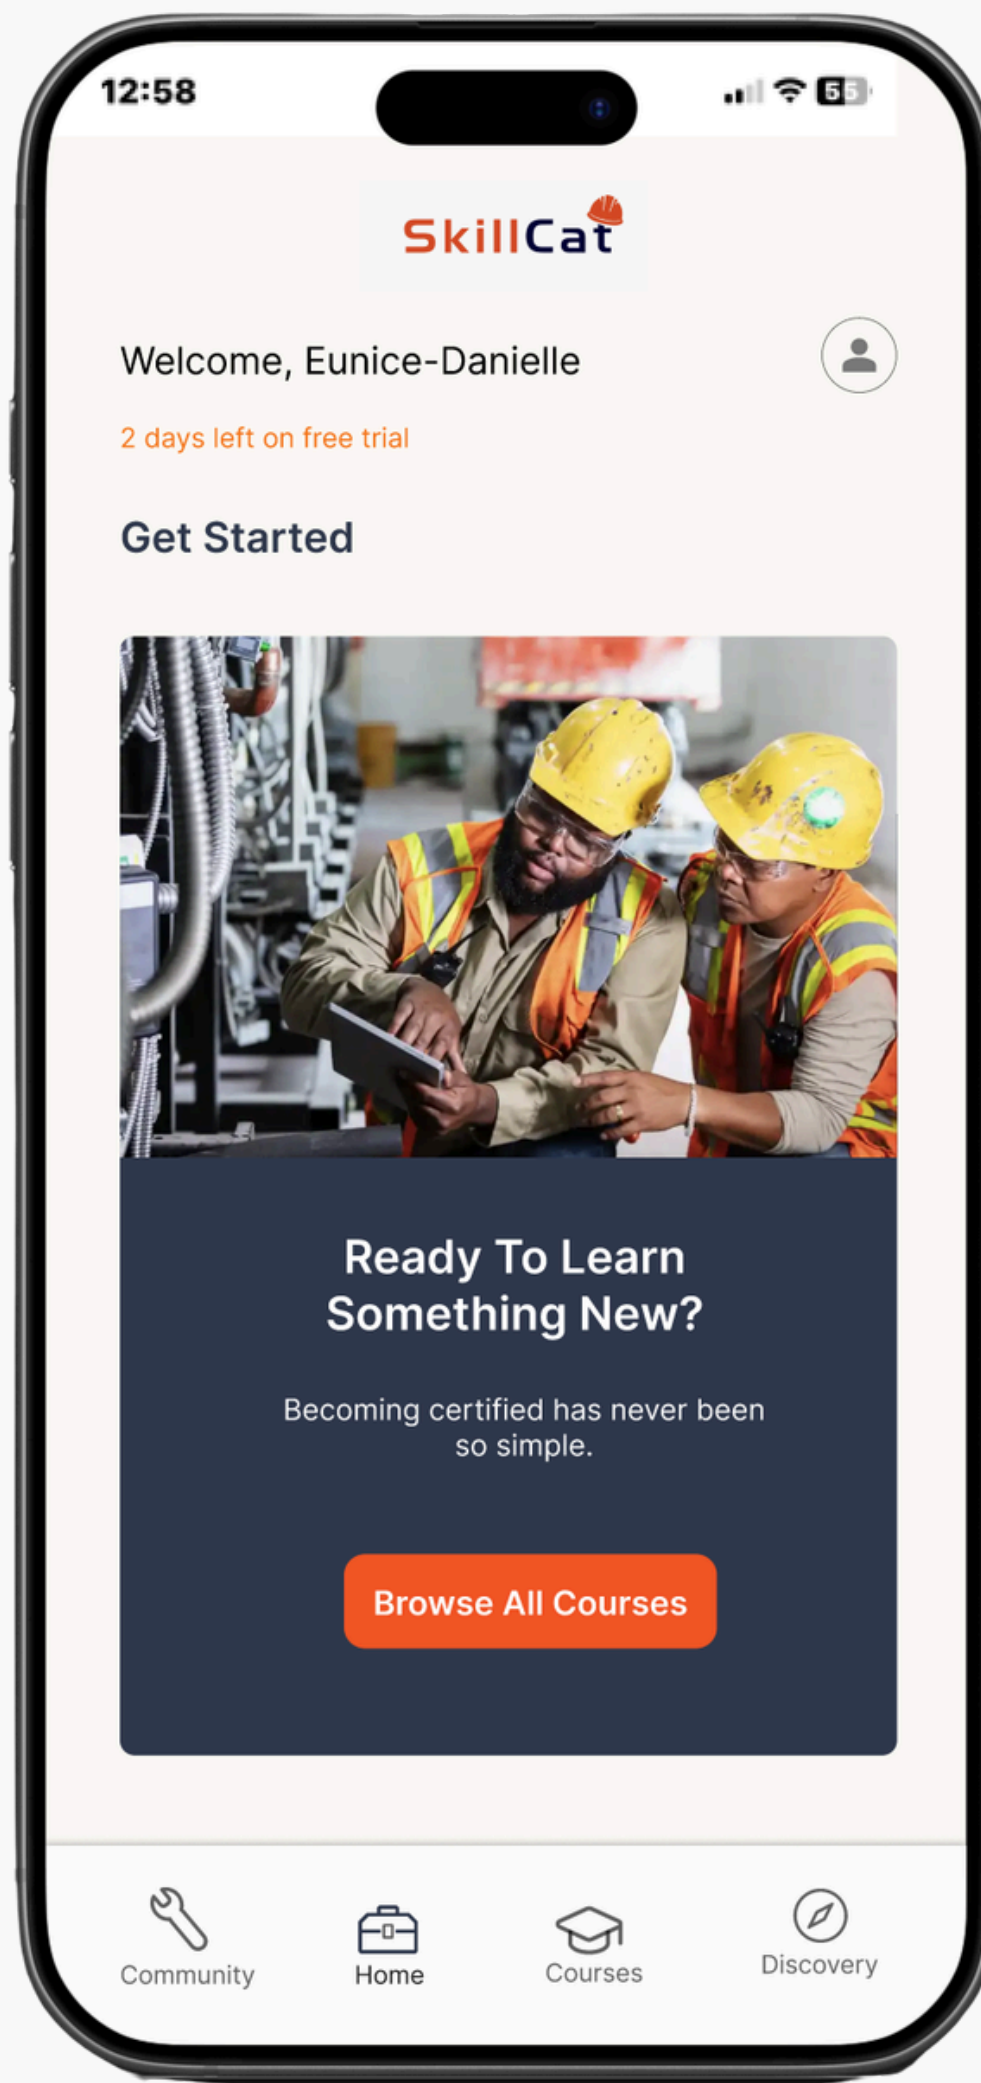

by Eunice-Danielle Malingue

August 12th, 2025

Current Home Screen

- Overwhelming with Courses not sorted in any particular order
- Continue Training sandwiched between EPA Certifications
- Resume Training fixed to the bottom but doesn't encourage resuming
- Various colors of orange that don't match the SkillCat orange brand
- Opportunity to reinforce branding

Re-Designed Home Screen

- Intro screen is the value proposition with an entry to the courses tab to browse
- Rather than continuation being a tab or a line on the screen it then becomes the whole page, this encourages returning users to progress in class and decrease churn
- Less clutter on the screen and direct instructions to pick up where you last left off.

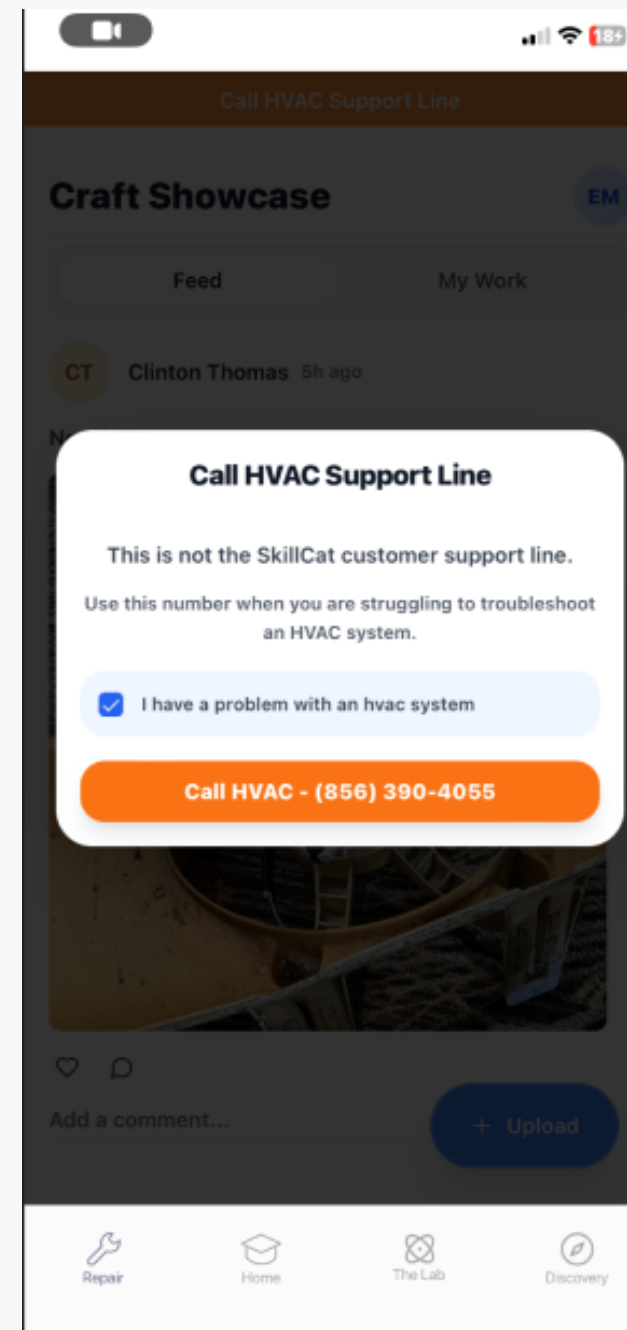

Why?

Learning Valuable Trade Skills Takes Time

How can we accompany users along the journey after we introduce them to the solution?

1.

Other UX Challenges

Check How Job-Ready You Are

Take short assessments to verify your HVAC apprentice skills.

Practical Scenario Analysis

3 questions

Evaluate your ability to apply their knowledge to realistic, entry-level situations by choosing the most logical course of action.

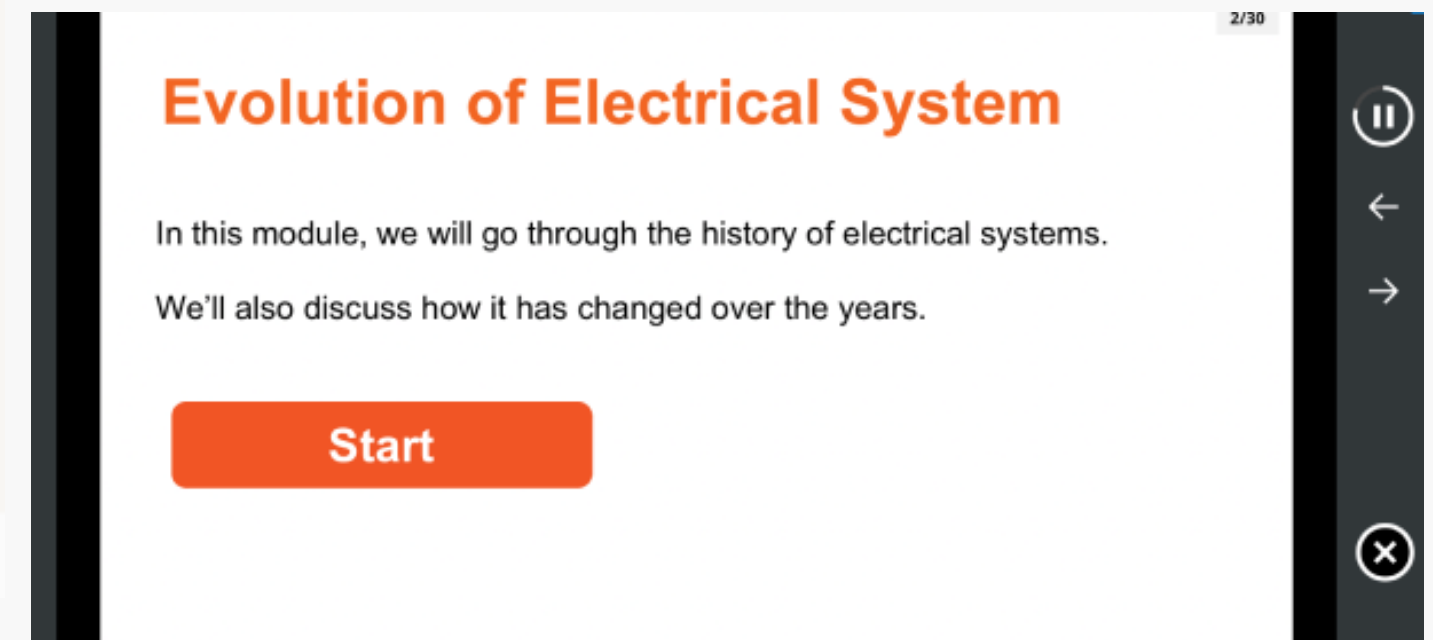

Start Assessment

Customer Communication & Professionalism

3 questions

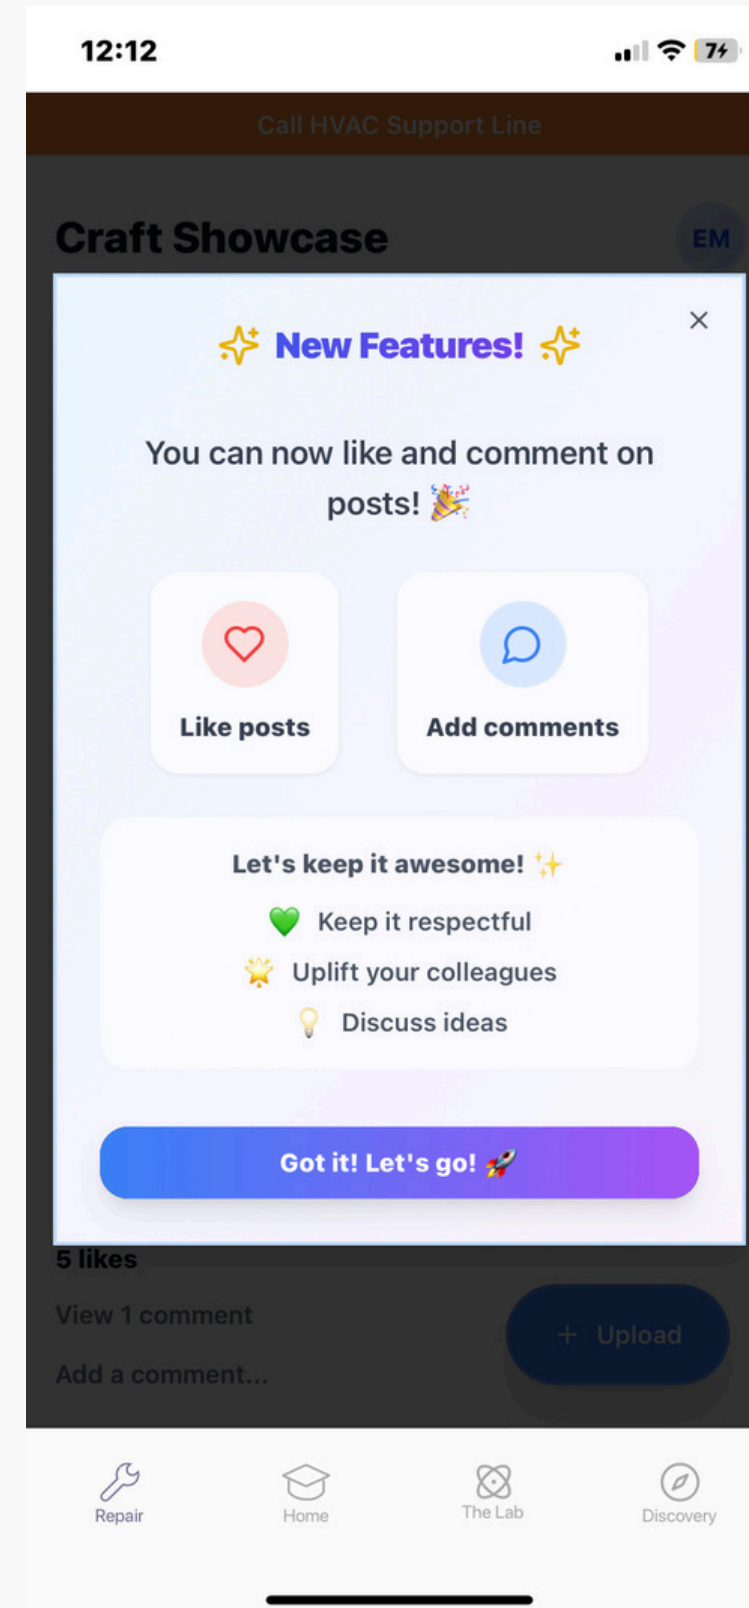

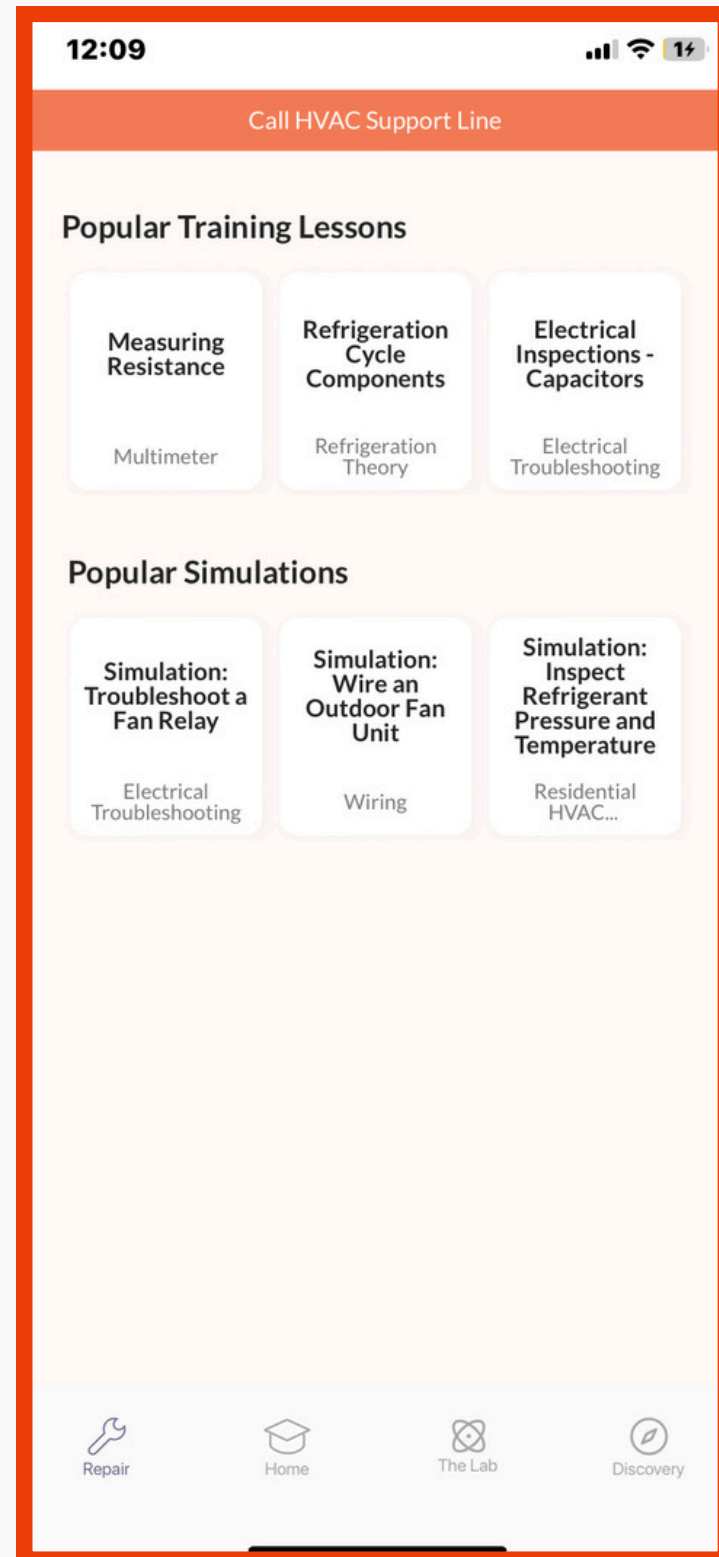

Assess your judgment in professional situations by selecting the most appropriate response.

Various shades of orange used randomly throughout the product can confuse the end user

2.

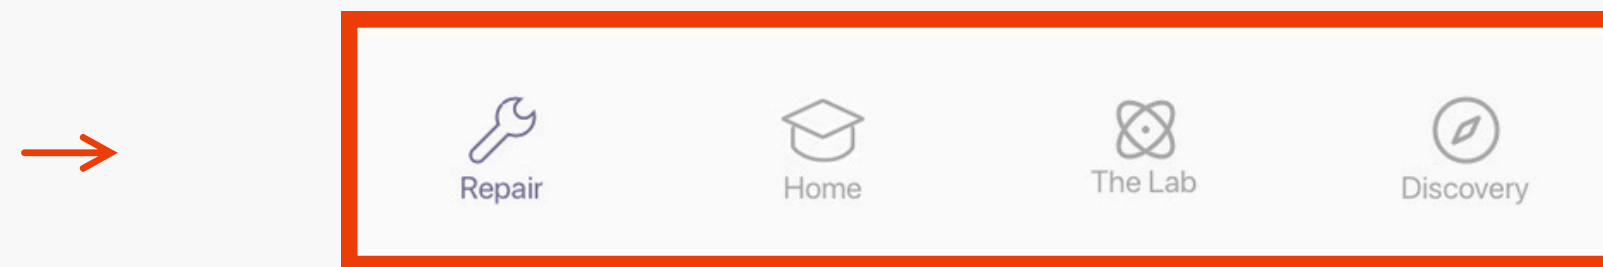

Other UX Challenges

Repair tab which should be called community or showcase due to the community posting populates a **training page** first for 5 seconds before populating the social feed

3.

Other UX Challenges

Menu is hella confusing cause the lab, and discovery tab can be condensed in one tab with different folders and the the lab only has three short quizzes that can be answered and then it renders the tab uselesss after it has been completed. It's also hard to understand what each tab has upon first look. There should be label switch with discovery (currently modules) to showcase and repair (currently social feed) to interactive modules.

Thank You
